

# CallegraTTS™

## Text-to-Speech

### Callegra\_IC™

**CallegraTTS** bridges the gap between voice and data communications using leading edge text-to-speech capabilities. Managing email messages through any telephone is simple, understandable and effective. No need to power up a laptop or connect a PDA—a quick call to a Callegra mailbox allows users to retrieve and reply to emails over the telephone as easily as they manage their voice and fax messages.

#### Key Benefits:

- Stay In Touch
- Leverage Your Investment
- Built For The Future

#### Stay In Touch

Getting emails while on the run can be a cumbersome task. CallegraTTS provides users with the ability to have their email read to them over the telephone including sender, subject, and date/time, followed by the text of the email itself and a list of any attachments. By adding an additional point of access for emails, people on the move are no longer limited to retrieving emails via laptops and PDAs. CallegraTTS makes staying in touch easier and more productive. Users can play, reply with a voice attachment, skip, save, and delete emails and manage voice and fax messages at the same time, empowering themselves with full message management capabilities over the phone from anywhere.

#### Leverage Your Investment

CallegraTTS allows a company to maximize the full power and usability of the entire Callegra solution. Each user mailbox enabled for Callegra client usage gains not only Internet, Microsoft Outlook, or Web Portal access to their voice and fax messages but also telephone based email management through CallegraTTS.

CallegraTTS is available with two levels of sophistication—TTS BASIC and CallegraTTS ADVANCED. TTS BASIC features Microsoft's SAPI 5 Text-to-Speech engine and is bundled as a value-added component in all Callegra and Solo VoiceMail systems. CallegraTTS ADVANCED, features SpeechWorks' Speechify Text-to-Speech System with the latest in concatenative technology, achieving the highest levels of realism and playback comprehension.

#### Built For The Future

CallegraTTS was carefully engineered to integrate into Callegra systems without requiring additional voice board hardware. In addition, CallegraTTS was designed to simultaneously integrate with multiple IMAP 4 compliant message stores including Microsoft Exchange, Lotus Notes, Novell GroupWise and many other enterprise email systems. CallegraTTS provides both small and large customers with maximum flexibility while preserving existing infrastructure investments.

*Callware solutions are distributed through a worldwide network of trained resellers that provide local expertise for small and medium-sized businesses. Since its inception in 1994, Callware has received numerous awards for its leadership in serving customers both domestically and abroad.
