CallegraWEB delivers anytime, anywhere messaging access and enhanced remote manageability for today's workforce—especially for mobile and remote professionals! CallegraWEB brings the advantages of an easy-to-use browser based client together with the universal coverage of the Internet to provide powerful messaging options for Callegra users everywhere.

Key Benefits:

- Efficient Access from Anywhere
- Technology Assisting Business
- Self-Administration
- Integrated Faxing

Efficient Assisting Anywhere

The CallegraWEB Inbox displays voice and fax messages for easy prioritization and management. Play voicemail and view faxes on any PC with an internet connection and web browser. The easy-to-use Callegra Address Book makes quick tasks such as creating, replying, routing and forwarding messages simple and efficient. The CallegraFAX printer installed on fax enabled Callegra .JUC systems enables faxing directly from the PC to anywhere. With the visual cues that the CallegraWEB inbox provides, users can respond to messages immediately or wait to handle several messages at once. This allows Callegra users to deal with important issues right away and minimize other interruptions.

Technology to Impact Business

CallegraWEB delivers technology that makes a positive impact on business. XML Web Services, the new standard for enterprise application integration, allows CallegraWEB to offer incredibly rich client capabilities with very efficient use of resources both for the client computer and the network connection. Additionally, the Callegra .JUC XML Web Services are openly available for use in designing and building custom applications, allowing business to optimize the feature set and functionality for each department or user as desired. Bringing value to the bottom line, not just enhanced messaging—CallegraWEB utilizes leading edge technologies that have been proven in the business world.

Powered by Callegra XML Web Services, the CallegraWEB Inbox displays voice and fax messages.

CallegraWEB™

For Internet Explorer

Self-Administration

Through the CallegraWEB Preferences menu, users can manage many of their own mailbox settings. The menu allows users to setup their voice mailbox for email by phone through CallegraTTS. Additionally, message retention parameters, notification types, plans and schedules, even long distance access codes or their current telephone extension can be adjusted quickly and easily, greatly reducing the load on the system administrator. Of course Callegra .UC system administrators retain control over individual user access levels, keeping the system secure and optimally configured yet allowing individual users easily to set up exactly the functionality and feature set they desire.

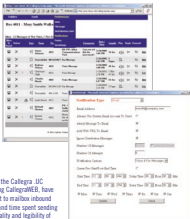

Integrated Faxing*

When the optional CallegraFAX services are installed on the Callegra .UC system, all mailbox owners with Callegra Clients, including CallegraWEB, have access to outbound desktop faxing and confidential direct to mailbox inbound faxing. These capabilities dramatically reduce the effort and time spent sending a fax from a fax machine and noticeably improves the quality and legibility of the transmitted document. Additionally, with Callegra .UC, CallegraWEB users can store their fax numbers directly in the Microsoft Outlook Contact Address Book, or any LDAP accessible address book available from within Outlook.

**Fax functionality is optional (see CallegraFAX brochure).*

The optional Sent Faxes archive allows users to see the status of outgoing faxes as well as view the fax and even resend if necessary.

Using the CallegraWEB Preferences Menu, users can administer their own boxes.

Callware solutions are distributed through a worldwide network of trained resellers that provide local expertise for small and medium-sized businesses. Since its inception in 1994, Callware has received numerous awards for its leadership in serving customers both domestically and abroad.
